Abstract

The new name *Roebuckiella* P.S.Short (Asteraceae) is published to replace *Roebuckia* P.S.Short (2014), nom. illeg., with new combinations made for the nine constituent species and infraspecific taxa recognised.

Keywords: Asteraceae, *Roebuckia* nom. illeg., *Roebuckiella*, new names, replacement names.

Introduction

Subsequent to publication of a review of the daisy genus *Brachyscome* s.lat. (Short 2014), in which I described the genus *Roebuckia*, it was brought to my attention that the latter name is a homonym of *Roebuckia* McLoughlin (1996, p. 29), a name applied to an Australian fossil fern. I here publish a replacement name, *Roebuckiella*, and make the appropriate new combinations to accommodate the taxa I previously placed in the illegitimate *Roebuckia* P.S.Short (2014).

Although *Roebuckia* P.S.Short is illegitimate, the names of new species and varieties I published under that name are legitimate and are basionyms for most of the new combinations made here (see Art. 55.1, *International Code of Nomenclature for Algae, Fungi and Plants*; McNeill et al. 2012).

I have chosen the new name to maintain a link to the illegitimate name which was chosen to commemorate the visit of William Dampier to Australian shores.

The names of species and infraspecific taxa are presented in the same numbered order, i.e. alphabetically, as in Short (2014). All synonyms, not just basionyms, are included.
